

UNDERGROUND ADVISOR

Individual Project 2023.6-2023.9

Brief Introduction

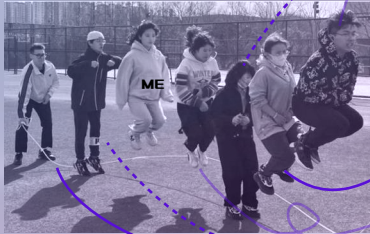

Inspired by common social phenomena, the project expresses the reflection on the current digital technology leading human beings towards convergence through an interactive exhibition, providing a marvellous digital-physical experience for the experiencers.

Technology

Modelling
Touch Designer programming, Python programming

INSPIRATION

As graduation approaches, my friends and classmates around me are starting to plan their future paths. When chatting about their vision for the future, I realized that the vast majority of my friends flocked to a few similar tracks. Few fantasized about becoming entrepreneurs or researchers, once sought-after careers. My world was suddenly filled with preppy teachers and preppy civil servants. It also made me wonder *why everyone seemed to suddenly have the same dreams of mass production?*

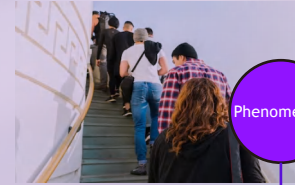

Preparing for the Teacher's Certificate

Preparing to take the civil service exam

SECONDARY RESEARCH

Conformity

Information pressure: The average person will normally assume that information provided by the majority has a greater probability of being correct than that provided by the minority.

Group pressure: The pressure exerted by the majority opinion of a group on the individual or minority opinions of its members.

It refers to the tendency of an individual to conform to a group as a result of group guidance and pressure on his or her perceptions or behaviors. It is a phenomenon that causes individuals to give up their conscious tendency to act contrary to their own wishes in opposition to group opinions or norms, and to change in the direction of conformity with the majority.

BACKGROUND

Enrollment in the national civil service

According to the research, the number of people applying for the national civil service has been growing steadily in recent years. The national application ratio is 68:1, which has been scary. In fact, the top ten popular jobs application ratio up to **20813:1**, which is insane.

The same phenomenon is occurring in the influencer industry. Microblogging recently released a "contemporary young people employment in the attention of what" questionnaire data: nearly 10,000 fresh graduates surveyed, **61.6%** of the employment will consider the job as an influencer and other similar occupations.

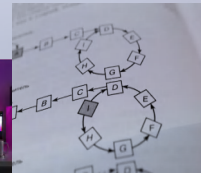

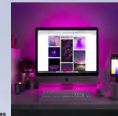

Under the background of the strong rise of social media and we media in the era of "everyone", the overload of massive network information, the diversification of user generated content, and the prevalence of network "balkanization", the opinion leaders tend to be similar or even "standardized" in the production of social network content.

表1 三线城市短视频网红孵化基地运营数据

运营阶段	运营时长 (天)	运营人数	运营时长 (天)	运营人数
第一阶段	15	1526	1526	1526
第二阶段	15	1526	1526	1526
第三阶段	15	1526	1526	1526

Along with the rapid development of technology, the economic downturn has led to a surge in the demand for "efficiency" in society. In order to improve efficiency, computerized data are increasingly being used to make decisions instead of the human brain, which also leads to the risk of information alienation.

Algorithm instead of thinking?

Conclusion

The convergence of mass psychology and the standardization of Opinion leader shaped by social networking platforms in the digital era may lead to the emergence of happiness coercion and convergence.

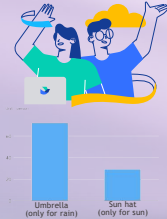

This can't help but remind people of the future. Will human thinking gradually be replaced by algorithms? People lose their subjectivity and tend to assimilate, while machines soar.

QUESTIONNAIRE

Scene Setup

Assuming the weather forecast predicts heavy rain tomorrow, but you find that today's clouds are in the shape of fish scales (indicating a geographical phenomenon of a large sun). At this point, the suitcase is only enough to hold one more thing, would you choose?

What is the tendency towards defining future happiness?

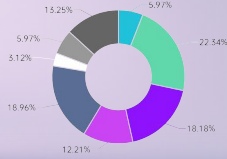

What may be the reasons for your choice above?

What do you often use to obtain information to make a decision?

- Books&Newspapers
- Search engine
- Academic platform
- Social software
- Social media
- Transmitted by others
- Video platform
- Television

If there were a technology that could quantify every decision, find the best information for you, and provide the best choice, would you be willing to use it frequently?

Conclusion

INTERVIEW

Nunu
Age:10
Education:
primary school

“

My plan for the future is to beat my grandpa at chess over this summer vacation-Then it's to get into Xuhui Middle School which **mom wants me to go**. If I don't get in, then I'd like to go to a middle school near my chess academy, where I'll have a lot of my best friends.

”

Jiang Zhao
Age:26
Education:
postgraduate

“

The most important goal I want to achieve at the moment is to get into the civil service. Although I have been studying design for many years and I like it, I would like to choose a **stable job**, even if the salary is low, after I **took a consideration of general environment**.

Environment

Trend

Market

”

Conclusion

As age changes, algorithms silently infiltrate the human decision-making system and take up a significant portion.

ARTISTS RESEARCH

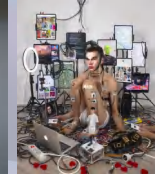

Filip Cusic

He is a multi-disciplinary Spanish artist whose works revolve around the body, exploring the impact of **digital technology** on our conscience and identity, integrating art, technology, and humanity.

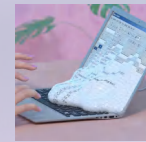

Nan Mo

This work is based on an imagination of future human identity. In the author's view, the future identity will break away from the definition of "human" and become a constantly flowing and boundless existence.

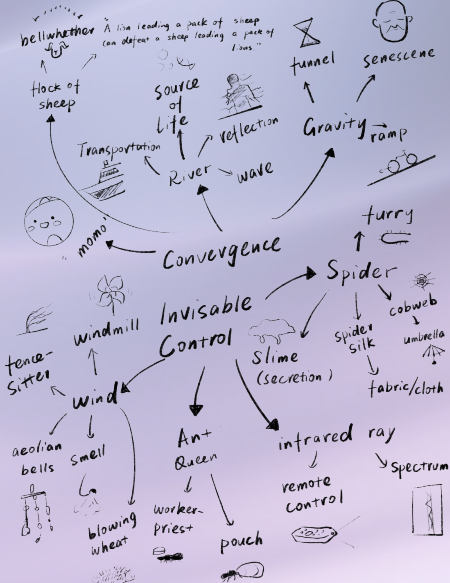

Steffen Ullmann

Steffen Ullmann visually suppresses or enhances the physical state and functionality of everyday items (computers, phones, etc.).

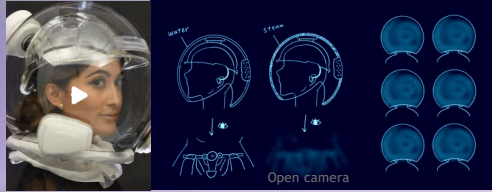

MINDMAP

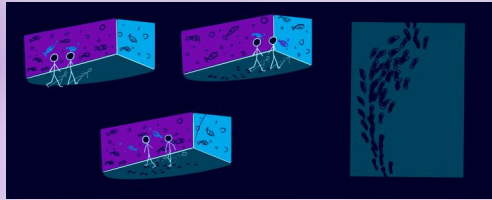

Based on these associations, I initially formulated four scenarios and user-tested each of them, as shown to the right.

SCHEME 1

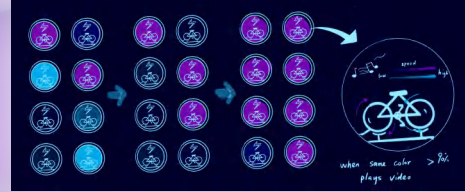

Interactivity	Playability	Thought provoking
2.75/5	3.25/5	3.75/5

SCHEME 2

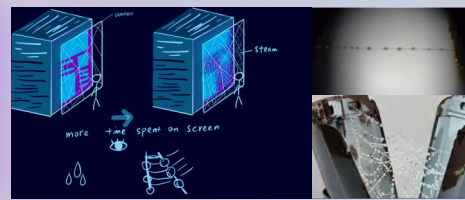

Interactivity	Playability	Thought provoking
3.5/5	3.5/5	4/5

SCHEME 3

Interactivity	Playability	Thought provoking
4.25/5	4.25/5	4/5

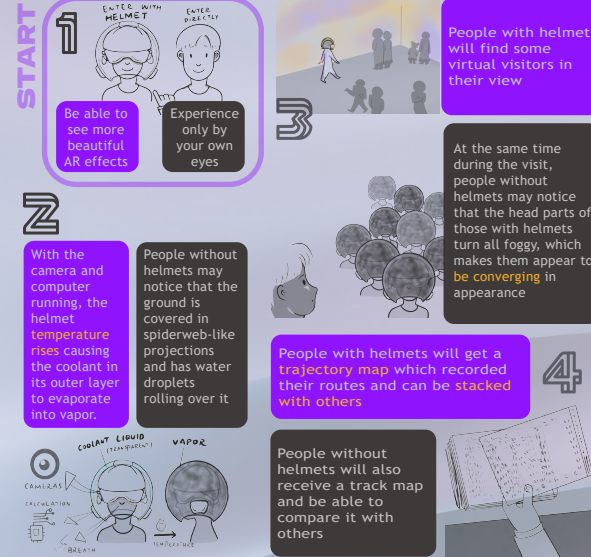

SCHEME 4

Interactivity	Playability	Thought provoking
3.75/5	2.75/5	3/5

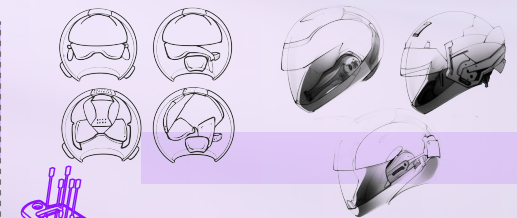

EXPERIENCE FLOW

Through continuous thinking and modification, the final program flowchart is as follows:

Code

```
let dots = [];  
const dotCount = 400;  
const connectionDist = 60;  
const vel = 2;  
  
function setup() {  
  createCanvas(windowWidth, windowHeight);  
  background(0);  
}  
  
function draw() {  
  if (mouseIsPressed) { // Check if the  
    mouse is pressed  
    dots.push({  
      x: mouseX,  
      y: mouseY,  
      c: color(255),  
      v: random(vel),  
      a: random(TAU)  
    });  
  }  
  
  for (let j = 0; j < dots.length; j++) {  
    // Draw connections  
    stroke(200);  
    strokeWeight(0.2);  
    for (let k = 0; k < dots.length; k++) {  
      let d = dist(dots[j].x,  
        dots[j].y, dots[k].x, dots[k].y);  
      if (d < connectionDist) {  
        line(dots[j].x, dots[j].y,  
          dots[k].x, dots[k].y);  
      }  
      // Update variables  
      dots[j].x += dots[j].v *  
        cos(dots[j].a);  
      dots[j].y += dots[j].v *  
        sin(dots[j].a);  
      if (frameCount % 60 == 0) {  
        dots[j].v = random(vel);  
        dots[j].a = random(TAU);  
      }  
    }  
  }  
}
